

EFFECTIVE HEALTH CHECKS OF NON-COMMUNICABLE DISEASES

Non-communicable diseases (NCD) are defined as being slow in onset and progression, and long in duration. Diseases including heart disease, stroke, diabetes, chronic respiratory disease and some cancers form part of the definition of NCD. Non-communicable diseases (NCD's) accounted for nearly two-thirds of global deaths in 2008. Worksites and companies are directly affected by NCD's due to reduced employee productivity, increased absenteeism and increased likelihood of disability. The prime purpose of the course is to enlighten and introduce participants on the impact of non-communicable diseases to the general public. All employers and employees need to know the impact of NCDs on the organization and know how to deal the effects.

Learning Objectives

- Understand the meaning of non-communicable diseases
- Appreciate the causes of non-communicable diseases
- Gain knowledge as to what the government is doing to prevent NCD
